

2.3 Environmental Management Policy

Unidata operates and maintains a Management System which meets the requirements of 14001:2015 legislation, regulations and subscribed codes of practice.

Unidata has a policy of using resources efficiently to minimise waste and energy and to minimise the likelihood of accidental discharges of pollutants.

Unidata has a policy of maintaining environmentally friendly working environment for staff, visitors and contractors by ensuring staff, visitors, subcontractors, suppliers and the general public are not exposed to unreasonable hazards.

Our aim is to have a minimal impact on the environment as a result of our activities, products and services and we shall fulfil our broad objective.

Our broad objective is to reduce or remove pollution.

Maintain an ISO 14001 compliant Environmental Management System which formalises the procedure for monitoring and reporting our impact on the environment and the things we do to lower our impact on the environment. Through our system we will comply with applicable legal requirements, such as the Environmental Protection Act (WA) and regulations.

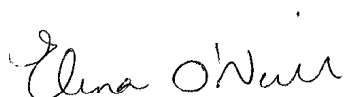

Our ISO 14001 Environmental Management System provides a framework for setting and reviewing environmental objectives and targets. We are also committed to comply with other requirements to which we subscribe, which relate to environmental aspects.

Promote an internal culture which encourages staff suggestions to minimise any negative impacts the facility may have on the environment and thus ensure that continual improvement is made to reduce the impact on the environment.

This Environmental Policy is communicated to management and staff and other parties involved with Unidata.

The Environmental Policy is publicly available and is displayed in our reception area

Any perceived breaches of this Environmental Management policy should be reported to the HSEQ Manager or the General Manager
